

### **IN THE SPECIFICATION**

Please amend the specification as follows:

In the paragraph beginning at page 3, line 10:

Figure 1 illustrates a computerized reel slot machine gaming system having an audio module, consistent with an embodiment of the present invention. The computerized gaming system shown generally at 100 is a video gaming system, which displays information for at least one game of chance on video display 101. Alternate embodiments of the invention will have other game indicators, such as mechanical reels instead of the video graphics reels 102. The game of chance is played and controlled with various buttons ~~[[102]]~~ 103, and in some embodiments also with a pull arm 104 to initiate reel spin. Value is wagered on the games, such as with tokens, coins, bills, or cards that hold value. The wagered value is conveyed to the machine through a changer 105 or a card reader 106, and winnings are returned via the returned value card or through the coin tray 107. Some further embodiments comprise a machine-readable medium with instructions stored thereon, such that the instructions can be executed to cause the computerized wagering game system to perform functions such as conducting a reel slot machine wagering game upon which monetary value can be wagered, or to perform other functions.
